

QUIZ#7: Adjacency Analysis

Download and unzip the geodatabase **ZionNatPark.gdb** from the website:
http://dverbyla.net/nrm435/quiz_data_2018/

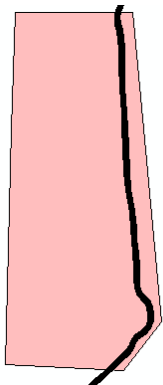

The geodatabase contains private parcel inholdings in Zion National Park

- ZionNatPark.gdb
 - Private_Parcels
 - Roads
 - Trails
 - ZionNatPark_boundary

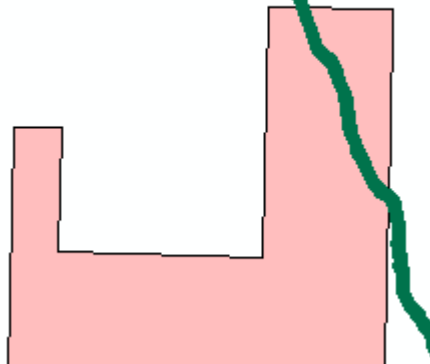

The roads have width of 10 feet, while the trails have a width of 3 feet (both are polygon feature classes).

Create a table listing the parcels that have either road or trail access, for example:

Shape *	TrailAccess	RoadAccess
Polygon	No	Yes
Polygon	No	Yes
Polygon	No	Yes
Polygon	No	Yes
Polygon	Yes	No

Road access

Trail access

All geoprocessing output should be stored in **ZionNatPark.gdb** container.

Save your work. Then create a map package: File→Share As→ Map Package...Save package to file (**do NOT check on Enterprise**)

Include Enterprise Geodatabase data instead of referencing the data

Also share your map package to a folder location, **not** to your geodatabase container.

Email me (dverbyla@alaska.edu) your map package **mpk** file. (not your arcmap document .mxd file) as an attachment (extensions are hidden by default)
